DETAILED ACTION

Reasons for Allowance

1. The following is an examiners statement of reasons for allowance: In response to the final office action mailed April 1, 2008, further in view of applicant's amendments filed on July 03, 2008, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks in view of the last Office action matter, as discussed in page 6 through 7, has been found persuasive, the rejection has been withdrawn, and therefore, independent claims 1-14 are allowed [1, 7 and 11-14 are independent], for the reasons discussed below:

With respect to claims 1-6 the prior art searched and of record neither anticipates nor suggests an image processing apparatus, comprising, a recorder for recording into a recording medium an image file in which image data is stored; a transferor for transferring at least said image data from said recording medium to an internal memory; and a reproducer for reproducing said image data transferred to said internal memory by said transferor, wherein each address forming said internal memory has a capacity of an L byte (L: integer of two or more), said recording medium is divided into a plurality of unit areas each of which has a capacity of an M byte (M: integral multiple of the L), and said recorder stores said image data into said image file in such a manner that said

image data transferred to said internal memory by said transferor is started from a head byte of an address.

Further, regarding to claims 7-10, the prior art searched and of record neither anticipates nor suggests an image processing apparatus that reproduces via an internal memory image data included in an image file recorded in a recording medium, comprising: a detector for detecting a size of specific data existing between a head location of said image file and a head location of said image data; and a first transferor for transferring to said internal memory said specific data and said image data in this order when the size of said specific data satisfies a first condition, wherein each address forming said internal memory has a capacity of an L byte (L: integer of two or more), said recording medium is divided into a plurality of unit areas each of which has a capacity an M byte (M: integral multiple of the L), and said first condition is a condition that the size of said specific data is an integral multiple of said L byte.

As to claims 11, the claim is allowed for the reasons the prior art searched and of record neither anticipates nor suggests an image processing apparatus that reproduces via an internal memory image data included in an image file recorded in a recording medium, comprising: a detector for detecting a size of specific data existing between a head position of said image file and a head position of said image data, and a transferor for transferring to said internal memory only said image data, out of said specific data and said image data, when the size of said specific data satisfies a predetermined condition, wherein each address forming said internal memory has a capacity of an L

byte (L: integer of two or more), said recording medium is divided into a plurality of unit areas each of which has a capacity of an M byte (M: integral multiple of the L), and said predetermined condition is a condition that the size of said specific data is an integral multiple of said M byte.

Regarding claim 12 the prior art searched and of record neither anticipates nor suggests an image processing method, comprising the steps of: recording into a recording medium an image file in which image data is stored; transferring at least said image data from said recording medium to an internal memory; and reproducing said image data transferred to said internal memory by said step, wherein each address forming said internal memory has a capacity of an L byte (L: integer of two or more), said recording medium is divided into a plurality of unit areas each of which has a capacity of an M byte (M: integral multiple of the L), and said step (a) is a step for storing said image data into said image file in such a manner that said image data transferred to said internal memory by said step (b) is started from a head byte of said address.

Claims 13 is allowed for the reason the prior art searched and of record neither anticipates nor suggests an image processing method for reproducing via an internal memory image data included in an image file recorded in a recording medium, comprising the steps of: detecting a size of specific data existing between a head location of said image file and a head location of said image data; and transferring to said internal memory said specific data and said image data in this order when the size

of said specific data satisfies a first condition, wherein each address forming said internal memory has a capacity of an L byte (L: integer of two or more), said recording medium is divided into a plurality of unit areas each of which has a capacity of an M byte (M: integral multiple of the L), and said first condition is a condition that the size of said specific data is an integral multiple of said L byte.

Finally, claim 14 is, also allowed for the reasons the prior art searched and of record neither anticipates nor suggests an image processing method for reproducing image data included in an image file recorded in a recording medium via an internal memory, comprising the steps of detecting a size of specific data existing between a head location of said image file and a head location of said image data; and transferring to said internal memory only said image data, out of said specific data and said image data, when the size of said specific data satisfies a predetermined condition, wherein each address forming said internal memory has a capacity of an L byte (L: integer of two or more), said recording medium is divided into a plurality of unit areas each of which has a capacity an M byte (M: integral multiple of the L), and said predetermined condition is a condition that the size of said specific data is an integral multiple of said M byte.

Therefore, claims 1 through 14, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention alone or in combination.
